WHITEPAPER

THE SUPREME DIGITAL TREASURE

Powering Orbank: A Decentralized Financial Revolution

Introduction

The global financial ecosystem is shifting from centralized, permission-based institutions to decentralized, open, and user-governed networks. Traditional banks impose restrictions, freeze accounts, delay cross-border transfers, and rely on biased systems.

Orbank, powered by TSDT (The Supreme Digital Treasure), solves these limitations by delivering a fully decentralized crypto bank. Users can open accounts, stake, invest, borrow, transact, and govern—completely on-chain and permissionlessly.

TSDT is a deflationary BEP-20 utility token that fuels all services of Orbank. It ensures a trusted, transparent, and censorship-resistant financial experience—backed by smart contracts and DAO governance.

Vision & Mission

MISSION:

To build a fully decentralized, community-governed crypto bank that empowers global users with direct access to DeFi services like staking, lending, investment, and digital governance—backed by a deflationary utility token, TSDT.

VISION:

Enable trustless banking services: account, savings, loans, investments, payments

- Reward users for participation
- Remove borders, intermediaries, and delays
- Govern everything through DAO voting
- Offer stable, censorship-resistant finance to all

Token Overview

PARAMETER		DETAILS
• **Token Name**	:	The Supreme Digital Treasure
• **Symbol**	:	TSDT
• **Network**	:	Binance Smart Chain (BEP-20)
• **Decimals**	:	18
• **Max Supply**	:	10,000,000 [10M]
• **Initial Supply**	:	0 [Minted 1500 daily through staking]
• **Contract Audit**	:	Certik (Phase-2)
• **Token Type**	:	100% Utility, Deflationary, Decentralized

Key Problems Solved by Orbank

TRADITIONAL PROBLEM

- Account freeze & censorship
- Cross-border transfer delays
- Paperwork & credit scoring
- Fraud and third-party theft
- Hidden fees and manipulation
- Central control and bias

ORBANK + TSDT SOLUTION

- Wallets are self-custodial and unfreezable
- Instant, global crypto transfers
- 1-second smart contract loans (collateral-based)
- Code-enforced ownership and on-chain validation
- Transparent DeFi protocol with fixed logic
- Full DAO governance by TSDT holders

Why a Decentralized Crypto Bank?

No intermediaries, censorship, or KYC restrictions

24/7 financial access, instant transactions

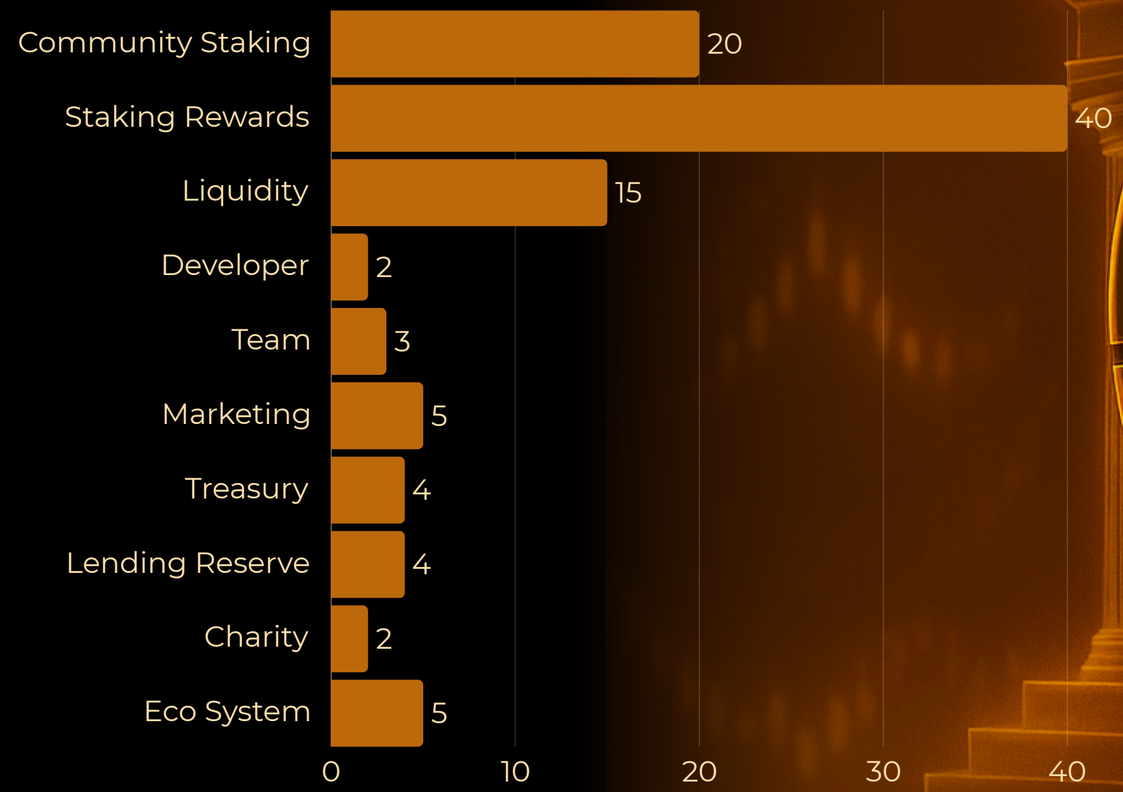

Community-owned and governed

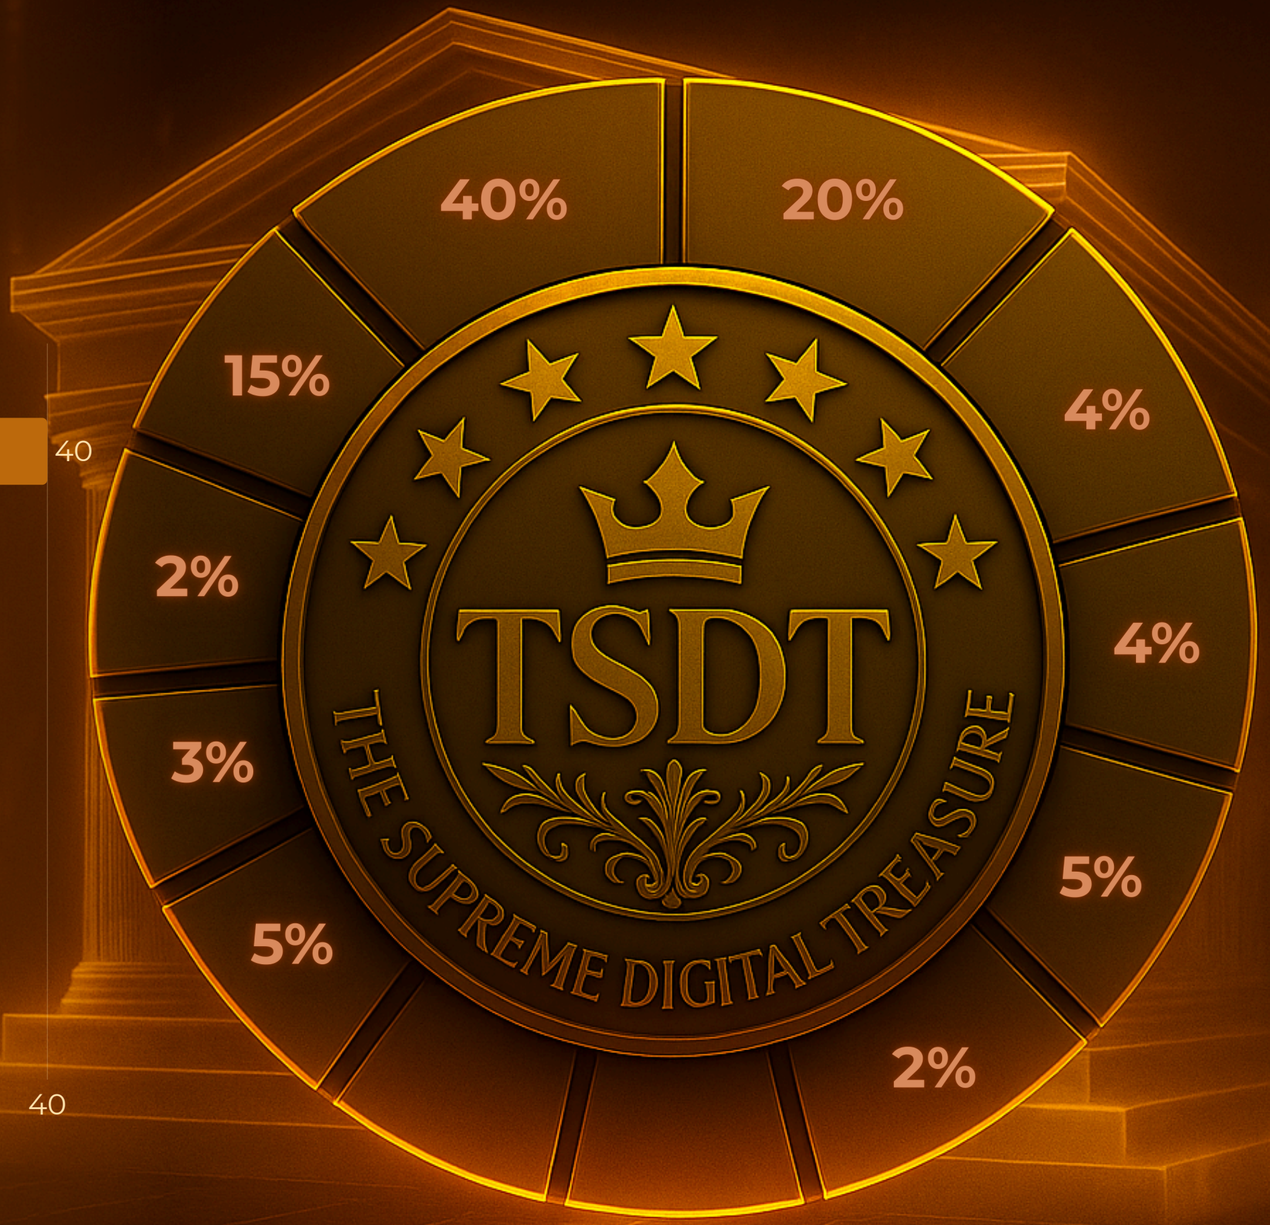

Full transparency and decentralization

Every feature powered by a single asset: TSDT

The Supreme Disital Treasury **TSDT**

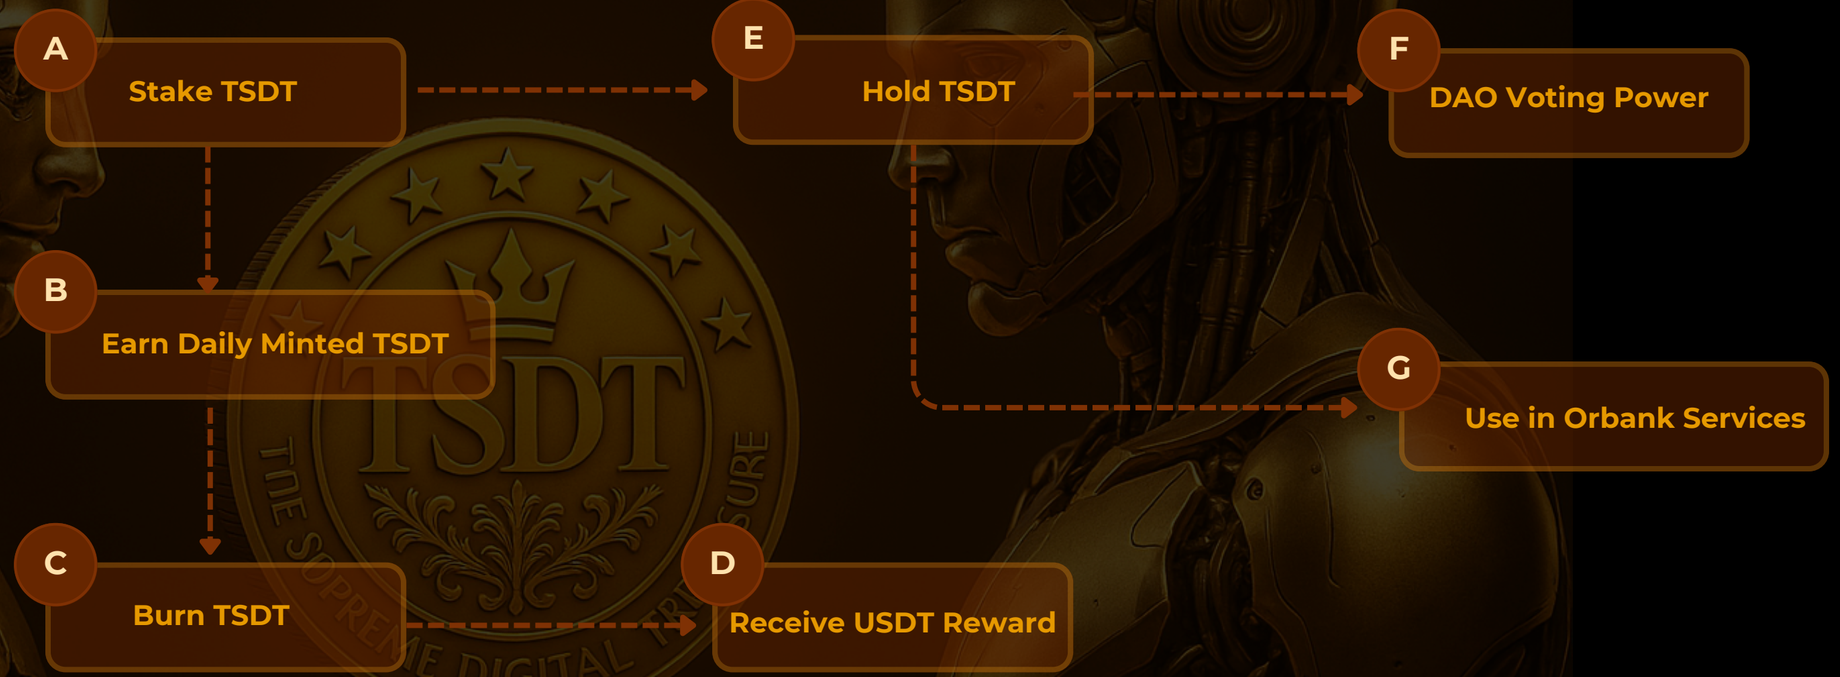

TSDT Tokenomics

The Supreme Disital Treasury TSDT

Token Mechanism

- **Daily Minting:** 1500 TSDT minted/day (community pool)
- **Reward System:** Burn TSDT to get USDT
- **Trigger for Public Sale:** Begins after staking phase ends
- **DAO & CEX Activation:** Post-staking milestone unlocks governance and listings

TSDT Token Utility

USE CASE		FUNCTIONALITY
Platform Fees	-	Platform Fee payment with TSDT
Collateral	-	TSDT used to secure loans and fixed deposits
Rewards	-	Stake to earn, burn to convert rewards into USDT
Governance	-	Vote on upgrades, treasury allocation, and rules
Lending/Loan	-	TSDT used to issue and repay loans
Utility	-	All service (Recharge, booking, bills) paid in TSDT

ORBANK
POWERED BY TSDT

DAO GOVERNANCE

TSDT holders propose and vote on:
- -Protocol upgrades
- -Treasury fund allocation
- -Service fees and logic changes

Multisig + on-chain voting ensures full decentralization

Community forums and vote portals planned in-app

ORBANK SERVICES
[Powered By TSDT]

- **Accounts** (No KYC, no freeze risk)
- **FD & SIP Plans** (TSDT-based saving & earning)
- **Flash Loans** (No paperwork, instant approval)
- **Utility Card** (Future integration with partners)
- **Bill Payments & Recharges** (with TSDT)
- **Flight & Hotel Booking** (Global services via TSDT)

Everything in Orbank runs through TSDT.

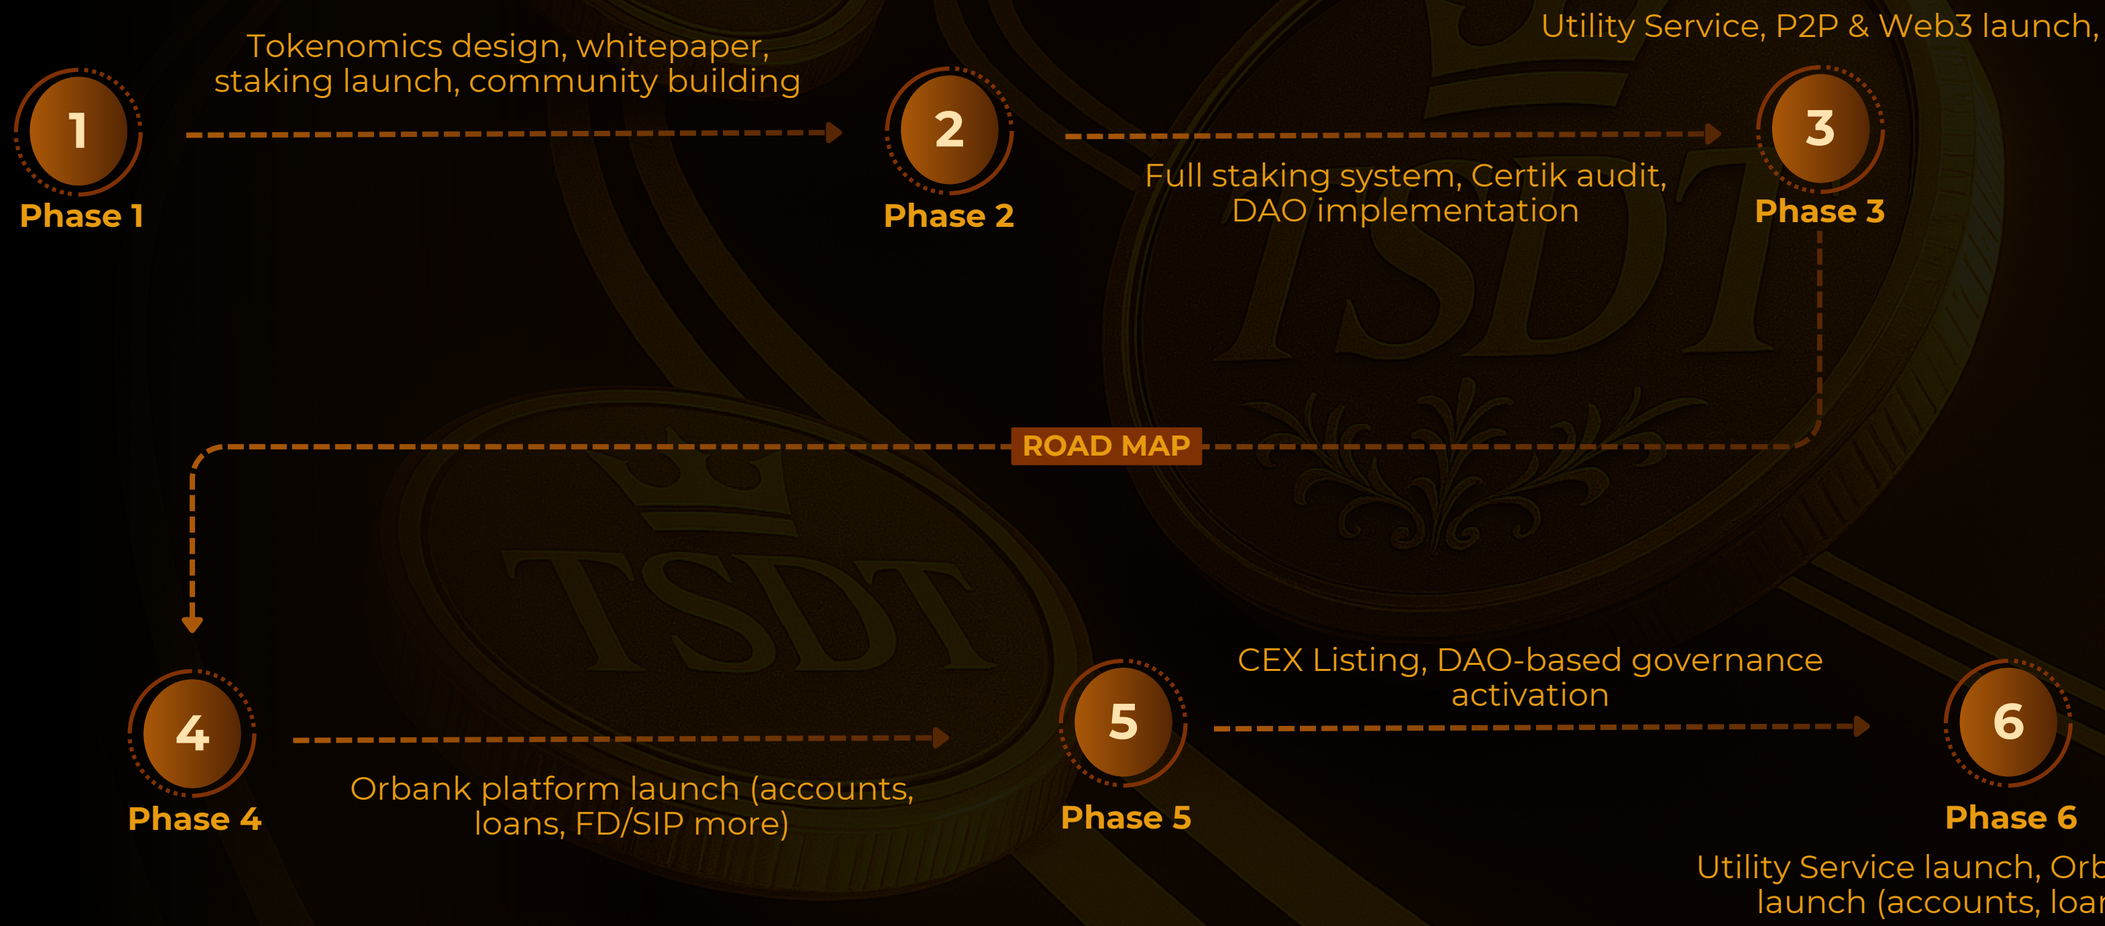

SECURITY INFRASTRUCTURE

- Smart contract auditing by Certik (Phase 2)
- Immutable logic: No admin control
- Multi-sig protected treasury wallet
- Transparent staking, minting, and loan issuance logic

The Supreme Disital Treasury **TSDT**

Roadmap

1
Phase 1
Tokenomics design, whitepaper, staking launch, community building
2
Phase 2
Full staking system, Certik audit, DAO implementation
3
Phase 3
Utility Service, P2P & Web3 launch,
ROAD MAP
4
Phase 4
Orbank platform launch (accounts, loans, FD/SIP more)
5
Phase 5
CEX Listing, DAO-based governance activation
6
Phase 6
Utility Service launch, Orbank platform launch (accounts, loans, FD/SIP

Competitive Advantages

FEATURE		BENEFIT
• **Self-Custody**	-	No custodians, 100% wallet control
• **No Freeze**	-	Decentralized, censorship-resistant
• **Instant Loan**	-	1-second smart contract loan approval
• **Global Transfer**	-	Cross-border, fast, low-cost
• **Fully Transparent**	-	On-chain staking, loans, treasury, and logic
• **DAO Control**	-	All upgrades and treasury via TSDT holder voting
• **USDT Rewards**	-	Stake & Burn → Get stablecoin rewards
• **Future CEX Liquidity**	-	Planned centralized listings for liquidity growth

Why TSDT is Future-Proof?

DEFLATIONARY
Burn mechanics reduce supply

GOVERNANCE-POWERED
Community-first model

FAIR TOKENOMICS
Transparent and vested allocations

AUDITED PROTOCOL
Certik ensures safety

REAL USE CASES
Not just theory—Orbank is live, usable

GLOBAL READY
No restrictions, KYC-free banking

Conclusion

TSDT is more than a token—it's the engine of Orbank, a decentralized financial ecosystem that eliminates borders, bureaucracy, and bias. With community control, deflationary supply, and real-world use cases, TSDT is paving the way for financial freedom—one transaction at a time.

Disclaimer

This document is for informational purposes only and does not constitute a prospectus, offering document, financial advice, or solicitation to purchase or sell financial instruments within the meaning of Directive 2014/65/EU (MiFID II), Regulation (EU) 2017/1129 (Prospectus Regulation), or Regulation (EU) 2023/1114 (MiCA Regulation).

TSDT (The Supreme Digital Treasure) is a decentralized utility token used exclusively within the Orbank ecosystem. It is not designed or intended to function as electronic money, a security token, or any other regulated financial instrument under EU law. TSDT does not represent ownership, profit-sharing, or any entitlement to dividends or voting rights outside the decentralized autonomous organization (DAO) structure.

No regulatory authority in the European Union or any member state has examined or approved this whitepaper or the underlying technology. The availability, functionality, and legal treatment of TSDT may differ depending on national laws within the EU, and users should verify their eligibility based on their local jurisdiction.

Users should exercise due diligence and consult independent legal, tax, and financial professionals before engaging with TSDT or Orbank. Participation in any decentralized finance (DeFi) protocol involves risk, including but not limited to market volatility, smart contract bugs, regulatory changes, and token devaluation.

TSDT is not intended for use in jurisdictions where its use or distribution is prohibited or restricted. Orbank and its contributors disclaim any responsibility or liability for any loss or damages incurred directly or indirectly through the use of this information or the TSDT token.

" TSDT is not just a token –it's a gateway to a decentralized financial future, owned and operated by the people. "
